

# Summary of selected commercialisation metrics for Australia, Canada, Israel, US and UK 2004-2014

---

Sources: Australia, National Survey of Research Commercialisation (NSRC); AUTM US and Canadian Licensing Activity Surveys; AUTM Statistics Access for Tech Transfer (STATT) Database; UK Higher Education - Business Community Interaction Survey, and special request from the Israel Central Bureau Statistics.

*Note: The missing value on Australia's commercialisation staff for 2014 is due to the change of definition in the 2014 NSRC data collection. This will be revisited in future iterations of the survey.*

*Note: Patent data for Australia is missing for 2014 as they are now collected through IP Australia's Analytics Hub and not through the NSRC. Patent data will be reported separately.*

*Note: There is no Israel data for United States Patents Issued per USD100m Research Expenditure (No.) as they do not collect this data.*

*Note: The figures in this table may differ from the previous NSRC reports due to the use of the latest US\$ Purchasing Power Parity (PPP) and because some sources have revised their data.*

*Note: (-) data not available.*

*Note: For further information, see the methodology on international data comparison.*
