

CERTIFIED REFERENCE MATERIAL CERTIFICATE OF ANALYSIS

NMIA P1373c: Dibromo-DDE

Report ID: P1373c.2024.01 (Bottled 240520)

Chemical Formula: C₁₄H₈Br₂Cl₂

Molecular Weight: 406.9 g/mol

Certified value

Batch No.	CAS No.	Purity (mass fraction)
20-AV-02	21655-73-2	99.3 ± 0.7%

The uncertainty has been calculated according to ISO Guide 35 and is stated at the 95% confidence limit ($k = 2$).

IUPAC name: 1,1'-(2,2-Dichloro-1,1-ethenediyl)bis(4-bromobenzene).

Expiration of certification: The property values are valid till 13 June 2029, five years from the date of re-certification provided the **unopened** material is handled and stored in accordance with the recommendations below. The material as issued in the unopened container and stored as recommended below should be suitable for use beyond this date, subject to confirmation of batch stability from the issuing body. The expiry date/shelf life does not apply to sample bottles that have been opened. In such cases it is recommended that the end-user conduct their own in-house stability trials.

Description: Colourless, needle-like crystals were prepared by synthesis, and certified for identity and purity by NMIA. Packaged in amber glass bottles with a septum and crimped aluminium cap or screw top cap.

Intended use: This certified reference material is suitable for use as a primary calibrator.

Instructions for use: Equilibrate the bottled material to room temperature before opening.

Recommended storage: When not in use this material should be stored at or below 4 °C in a closed container in a dry, dark area.

Metrological traceability: The certified purity value is traceable to the SI unit for mass (kg) through Australian national standards via balance calibration. In the mass balance all impurities are quantified as a mass fraction and subtracted from 100%. Quantitative NMR provides an independent direct measure of the mass fraction of the analyte of interest, calibrated with an internal standard certified for purity (mass fraction).

Stability: This material has demonstrated stability over a minimum period of three years. The measurement uncertainty at the 95% confidence interval includes a stability component which has been estimated from annual stability trials. The long-term stability of the compound in solution has not been examined.

Homogeneity assessment: The homogeneity of the material was assessed using purity assay by GC-FID on ten randomly selected 1-2 mg sub samples of the material. The material was judged to be sufficiently homogeneous at this level of sampling as the variation in analysis results between samples was not significantly different at a 95% confidence level from that observed on repeat analysis of the same sample.

Safety: Treat as a hazardous substance. Use appropriate work practices when handling to avoid skin or eye contact, ingestion or inhalation of dust. Refer to the provided safety data sheet.

Team Leader,
Chemical Reference Materials, NMI.
24 June 2024

This report supersedes any issued prior to 21 June 2024

NATA Accreditation No. 198 / Corporate Site No. 14214.

CIPM MRA notice: This certificate is consistent with the capabilities that are included in Appendix C of the CIPM MRA drawn up by the CIPM. Under the CIPM MRA, all participating institutes recognize the validity of each other's calibration and measurement certificates for the quantities, ranges and measurement uncertainties specified in Appendix C. The "CIPM MRA Logo" and this statement attest only to the measurement(s) applied for determining the certified values on the certificate (for details see <http://www.bipm.org>).

Legal notice: Terms and Conditions associated with the provision of this reference material can be found on the NMIA website.

Characterisation Report:

The identity was confirmed by a range of spectroscopic techniques, NMR, IR and MS. The certified purity value by qNMR was obtained using the four-proton doublet at 6.6 ppm measured against a certified internal standard of dimethyl sulfone. Supporting evidence is provided by a combination of traditional analytical techniques, including GC-FID, thermogravimetric analysis, Karl Fischer analysis, ¹H NMR spectroscopy and elemental microanalysis.

QNMR:	Instrument:	Bruker Avance-III-500
	Field strength:	500 MHz
	Solvent:	Benzene- <i>d</i> ₆ (7.16 ppm)
	Internal standard:	Dimethyl sulfone (100.0% mass fraction)
	Initial analysis:	Mean (6.6 ppm) = 99.3%, s = 0.3% (4 sub samples, April 2020)
GC-FID:	Instrument:	Varian CP-3800 OR Agilent 8890
	Column:	VF-1MS, 30 m × 0.32 mm I.D. × 0.25 μm
	Program:	170 °C (1 min), 10 °C/min to 300 °C (3 min)
	Injector:	250 °C
	Detector Temp:	320 °C
	Carrier:	Helium
	Split ratio:	20/1
	Relative mass fraction of the main component:	
	Initial analysis:	Mean = 100.0%, s = 0.01% (10 sub samples in duplicate, April 2020)
	Re-analysis:	Mean = 99.93%, s = 0.01% (5 sub samples in duplicate, June 2024)
Karl Fischer analysis:		Moisture content ≤ 0.2% mass fraction (April 2020 and May 2024)
Thermogravimetric analysis:		Volatile content could not be determined due to the volatility of the material.

Spectroscopic and other characterisation data

GC-MS: Instrument: Agilent 6890/5973
 Column: DB-5MS, 30 m x 0.25 mm I.D. x 0.25 μ m
 Program: 170 $^{\circ}$ C (1 min), 10 $^{\circ}$ C/min to 300 $^{\circ}$ C (3 min)
 Injector: 250 $^{\circ}$ C
 Split ratio: 20/1
 Transfer line temp: 280 $^{\circ}$ C
 Carrier: Helium
 Scan range: 50-550 m/z

The retention time of the parent compound is reported with the major peaks in the mass spectra. The latter are reported as mass/charge ratios and (in brackets) as a percentage relative to the base peak.

Parent (10.8 min): 410 (31), 408 (89), 406 (100), 404 (39), 336 (25), 292 (41), 246 (50), 176, (81), 123 (32), 105 (25), 88 (24), 75 (16) m/z

TLC: Conditions: Kieselgel 60F₂₅₄. Hexane
 Single spot observed, R_f = 0.7. Visualisation by UV at 254 nm.

IR: Instrument: Biorad FTS300MX FT-IR
 Range: 4000-400 cm^{-1} , KBr Pellet.
 Peaks: 3083, 3065, 1903, 1584, 1485, 1392, 1071, 1011, 858, 824, 790 cm^{-1}

¹H NMR: Instrument: Bruker Avance III-500
 Field strength: 500 MHz
 Solvent: CDCl₃ (7.26 ppm)
 Spectral data: δ 7.14 (1H, d, J = 8.5 Hz), 7.48 (1H, d, J = 8.5 Hz) ppm
 Isopropanol estimated at 0.1% mass fraction observed in the ¹H NMR (June 2024)

¹³C NMR: Instrument: Bruker Avance III-500
 Field strength: 126 MHz
 Solvent: CDCl₃ (77.16 ppm)
 Spectral data: δ 120.7, 122.7, 131.2, 131.8, 137.9, 138.5 ppm

Melting point: 123-124 $^{\circ}$ C

Microanalysis: Found: C = 41.4 %; H = 1.9 % (May 2020)
 Calculated: C = 41.3 %; H = 2.0 % (Calculated for C₁₄H₈Br₂Cl₂)
